

Franciele Parolini

Human Movement System (Re)habilitation

Franciele Parolini is a physiotherapist and researcher with academic and clinical experience in the areas of human movement, prevention, and musculoskeletal rehabilitation. With a PhD in Physiotherapy from the University of Porto, she has conducted research in the field of low back pain, neuromuscular control, and artificial intelligence applied to rehabilitation. She has published various international scientific articles and is a guest lecturer at higher education institutions. Her work focuses on the integration of research and clinical practice, with an emphasis on the analysis of human movement and the application of emerging technologies in rehabilitation.
